FIS, Belgrade

Dear Hiring Manager,

I am applying for the position of Quality Assurance Analyst/ Automation advertised on your website.

I've started my career as an economist, working in various fields (administration, accounting, auditing). I was working in companies that develop financial software.

I'm currently working at Banca Intesa as a Software Tester on different tasks, such as:

- Analyzing bank applications to identify defects and weaknesses. Reporting issues to developers and verifying fixes to client satisfaction.
- Designing test cases.
- Writing SQL queries on a daily basis.
- Controlling business implementation of application before release.
- Migrating of data for the rollout phase.
- Executing of automation tests in Unified Functional Testing and TestComplete.

Besides all of that and regarding the skills and knowledge that this position requires, I can contribute to your company with the following:

- I have gone through a lot of business processes as an auditor and as you are dealing with financial software, I think that I will not have a problem to dive in and understand them which is crucial for QA.
- So with the respecting of standards I have the ISTQB Foundation Level Certificate, which covers all types of software testing and the whole software testing life cycle.
- Seeing that automation is important in the testing process I've started looking into Selenium. I made a few simple tests in Selenium using Python. One of them is a basic automation for the application process for this job on your website. You can find it here: <https://github.com/andjela-pajic/fis-Quality-Assurance-Analyst-Automation>
- As far as the Scrum methodology concern, I've finished the Scrum workshop.

I am highly motivated to handle all the challenges that you put on my way and to show you my dedication and will, to further improve my knowledge, abilities and technical skills.

I hope that pursuant my portfolio (all links to my work are listed in the attached CV), intellectual performances and initiative for learning I will be capable to respond to the required responsibilities and tasks covered by the position you announced as open.

Thank you for your consideration.

Sincerely,

Anđela Pajić
